FLIGHT MANAGEMENT SYSTEM Operator's Manual

Flight Management Systems (FMS) are able to compute all relevant aspects of an entire flight using navigation and performance databases stored in the unit as well as pilot entered data. Pilots interact with the system by using one to three identical Multipurpose Control and Display Units (MCDU). Fig. 1: Overview of the Multipurpose Control and Display Unit (MCDU) used in the Airbus A320.

Brief Introduction to Flight Management Systems

A Flight Management System (FMS) is a centralized computer system used in airliners, and other high-performance aircraft, to manage many of the aircraft systems, including (but not limited to) the flight plan. Contemporary airliners rely on the FMS to automate a wide-variety of tasks, previously performed by navigators and flight engineers.
